

Contents

The project and its authors	7
1. Telescopes for planetary observation	13
1.1. Introduction	13
1.2. Best aperture for a planetary telescope?	13
1.3. Quality standard for high resolution optics	14
1.4. Effect of central obstruction	15
1.5. Telescopes for planetary observations	18
1.6. Diffraction by the secondary mirror spider	26
1.7. Examples of telescopes optimized for planetary observations	26
Notes: Chapter 1	32
2. Visual Observation & Drawing	33
2.1. Why observe with your eyes?	33
2.2. Improve your vision	35
2.3. Drawing	45
3. Observing Conditions	51
3.1. What is turbulence?	51
3.2. Local turbulence and the choice of an observing site	55
3.3. Dome and shelter turbulence	56
3.4. Instrument turbulence	57
3.5. Forecasting Seeing	60
Notes: Chapter 3	67
4. Getting equipment ready for high resolution	69
4.1. Tuning the telescope's optics for high resolution	69
4.2. High resolution planetary imaging	72
4.3. Determining the best focal length for Imaging	78
Notes: Chapter 4	82
5. Image Acquisition	83
5.1. Introduction	83
5.2. Focussing	83
5.3. Cameras	85
5.4. Camera settings	92
5.5. Acquiring the images	94
5.6. Appendix	96
6. Filters in digital planetary imaging	97
6.1. Essential concepts	97
6.2. Red trichromatic filters	98
6.3. Infrared filters	99
6.4. High pass red filter (or "R+IR")	102
6.5. Blue trichromatic filters	104
6.6. Ultraviolet filters	105
6.7. Wratten 47 (Violet) filter	108
6.8. Methane filter (CH ₄)	109
6.9. Luminance and anti-infrared filters	112
6.10. Green trichromatic filters	113
6.11. Other filters?	113
6.12 What filters should I buy to begin with?	114
6.13. Summary table	114
Notes: Chapter 6	114

7. Processing Planetary Images	115
7.1. General image processing	115
7.2. Derotation techniques	119
7.3. Pre-processing	128
7.4. Processing the details	130
Notes: Chapter 7	136
8. Color Image Processing	137
8.1. The RGB method	138
8.2. Creating color from LRGB images	148
8.3. RGB or LRGB?	151
Notes: Chapter 8	151
9. Mercury	155
9.1. Historical observations	155
9.2. Physical data for the planet	155
9.3. Observations and photography	156
9.4. Analysing the images	157
9.5. Conclusion	158
10. Venus	159
10.1. Historical observations: its elusive details	159
10.2. Physical data	161
10.3. Observing the planet	164
10.4. Visual observations	166
10.5. Imaging the planet	167
10.6. Conclusion	171
Notes: Chapter 10	172
11. Mars	173
11.1. Aphelion, perihelion and the fifteen year cycle	173
11.2. Its surface: seas, deserts and volcanoes	176
11.3. Cycle of its ice caps and polar regions	176
11.4. Aphelion climate	179
11.5. The dust storm season	181
11.6. Observing and photographing Mars	185
11.7. The next Martian oppositions	188
Notes: Chapter 11	188
12. Jupiter	189
12.1. Understanding Jovian cloud movements	189
12.2. Its belts, zones and vortices	190
12.3. Activity observed in the main domains of the planet	192
12.4. Jupiter's cycles of activity	198
12.5. Jupiter's moons	202
12.6. Observations and photography	203
12.7. Annex: Jet-streams and winds	206
Notes: Chapter 12	206
13. Saturn	207
13.1. Saturn's atmosphere	207
13.2. Saturn's activity	210
13.3. Seasonal effects on Saturn	211
13.4. Its Rings	215
13.5. Its moons	217
13.6. Observations and Photography	219
13.7. Conclusions	220
Notes: Chapter 13	220

14. Uranus	221
14.1. Atmosphere of Uranus: belts & spots	221
14.2. Observing and photographing Uranus	224
Notes: Chapter 14	228
15. Neptune	229
15.1. Its very active atmosphere	229
15.2. Observing and photographing Neptune	230
Notes: Chapter 15	232
16. Ephemerides and planning observations	235
16.1. Orbital parameters	235
16.2. Orientation of the globes and ephemerides	236
16.3. Planning observations using ephemerides	238
Notes: Chapter 16	239
17. Data analysis tools	240
17.1 Measuring positions on planetary discs	241
17.2. Drift charts	243
17.3. Mapping tools	249
17.4 Animations	253
17.5. Photometry	254
17.6. Spectrometry	257
17.7. Databases	257
Notes: Chapter 17	260
18. Observing projects	260
18.1. Observing planetary surfaces	262
18.2. Observing and monitoring planetary weather	264
18.3. Observing planetary satellites	268
18.4. Observing planetary occultations and eclipses	270
18.5. Conclusion	276
19. Collaborating with the professional community	277
19.1. Professional and amateur astronomy	277
19.2. Collaboration: on the observations	278
19.4. Collaboration: on processing and analysis of the observations	279
19.5. Conclusion	280
Notes: Chapter 19	280
20. Amateur networks	280
20.1 Associations	281
20.2 Project specific organizations	282
Bibliography	284
Chapter 1	284
Chapter 2	284
Chapter 3	285
Chapter 5	285
Chapter 6	285
Chapter 7	286
Chapter 8	286
Chapter 9	286
Chapter 10	286
Chapter 11	287
Chapter 12	288
Chapter 13	288
Chapter 14 and 15	288
